### **Executive Summary**

By using the tool Brandwatch, we were able to gain a plethora of information regarding the organization Oceana's online presence.

Overall, we determined that posts that include a text theme that is more causal is better recieved and more likely to be retweeted. Posts that include a video has a higher retweet rate than GIF or photos. Posts that include a hashtag that related to a holiday has a higher retweet count with alliteration hashtags being a close second. Posts that don't include a URL are more likely to be retweeted than those that include one. To summarize, posts that have a causal text theme accomplined by a video and a holiday-themed hastage without a URL are likely to recieve the most interaction.

Another one of our main goals were to find out what Oceana's current audiences were talking about, how to appeal to new audiences, and how the organization compares to organizations with similar missions.

Twitter proved itself to be the content source where the majority of posts surrounding Oceana came from, with Tumblr and Reddit trailing pretty far behind for the next most popular platforms. Topics surrounding reducing plastic pollution, saving marine life, raising money for marine conservation organizations, and pop culture were the most interacted with across the platforms.Sentiment on Twitter was overwhelmingly positive, but more equally positive and negative on Tumblr and Reddit, which often focused on pollution or legislative actions that needed to be taken. Content that included hashtags for popular events such as #worldoceansday and #turtletuesday were highly engaging, as well as content containing visuals of cute marine life.

In order to gain a deeper understanding of Oceana's social media metrics, we decided to also use the tool Keyhole to analyze the data. Keyhole provides a variety of useful tools to help supplement previous findings for Oceana's social media, and serve to further cement our findings related to our goals. We used Keyhole to compliment findings specifically about the organization, and what performs best within owned data. Most frequent and most engaging post types are text posts. The single most frequent and most engaging media posts are videos.

#### Introduction

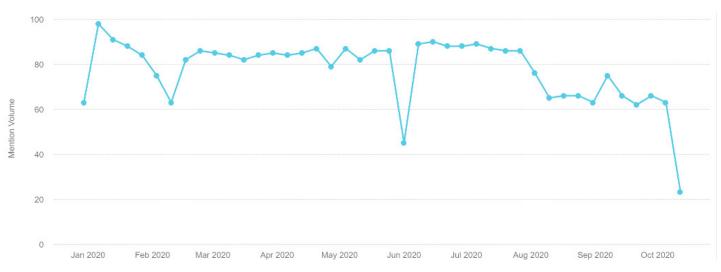

To gain a better understanding of which social media posts recieve the highest engagement, we analyzed the Twitter account and posts of Oceana. We specifically examined the different types of text, images, hashtags, urls and mentions that the organization has used in the past.

We asked the following questions to guide direct our research:

- —Which text theme recieves the most interaction on this platform?
- —Which image type recieves the most interaction on this platform?
- —Which hashtag type recieves the most interaction on this platform?
- —Which URL type recieves the most interaction on this platform?

The ulitmate purpose of completing this research is to determine which type of tweets Oceana should post more of to increase their engagement on Twitter. We decided to report current engagement based on the number of retweets a post receives by the type of text, image, hashtags and URL used in the tweets.

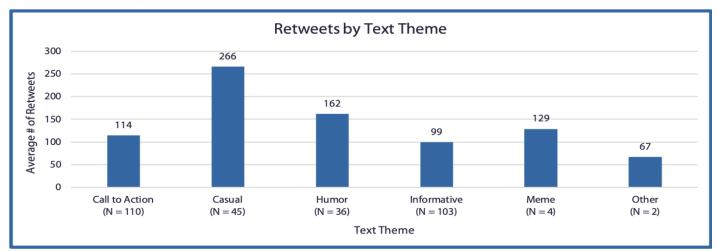

#### Dataset

For this, we examined posts made btweent January 1, 2020 through October 31, 2020

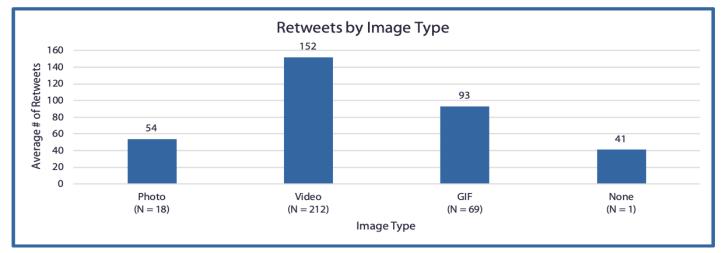

Oceana posts most steadily during the spring months, February through April, with a steady average of 85 posts; in the summer months of June and July, they average 88 posts per week.

#### **Retweets by Text Theme**

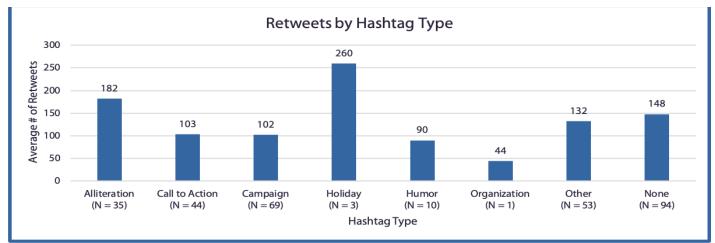

Oceana's goal is to be informative and interactive with its audience by posting informational and relatable content. When looking at the data, we found that Oceana's posts geared mainly toward imploring its audience to take action by asking them to sign a petition. It is clear that the audience did not interact with the "call-to-action" type of media as it has the third to last amount of average retweets per post in this category. Media posts that contained casual conversation got the most amount of average retweets.

### Retweets by Image Type

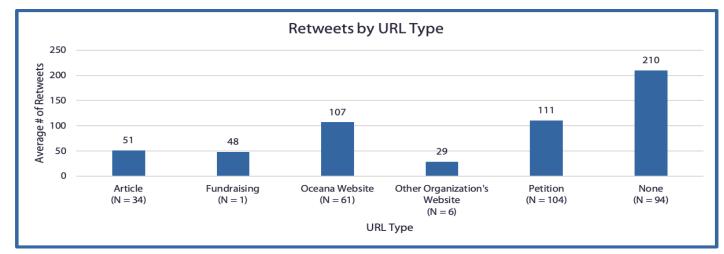

Oceana was very consistent with posting a image type with their posts. The main image type that has been used is a video and the second most popular type being a GIF. As video was the most used image type, it was also the image type that was retweeted most by Oceana's audience.

#### Retweets by Hashtag Type

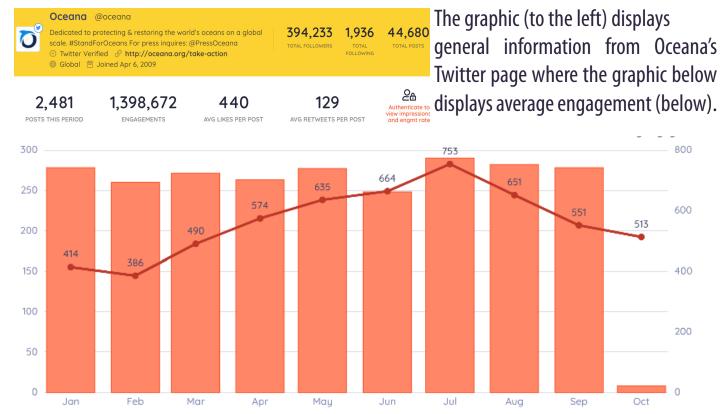

We determined that while Oceania includes more hashtags related to campaigns or hashtags than contained a call-to-action, they received the most retweets from posts that had hashtags related to a holiday or tweets that included alliteration. We concluded that these types of hastags also recieved a higher percentage of retweets overall, compared to the frequency that they were posted.

#### **Retweets by URL Type**

Most of the URL's associated with Oceana's posts are URL's that take the audience to a petition but the post that didn't include any type of URL received the most retweets. Tweets with a URL leading to a petition received the second highest number of retweets, followed closely by the URL for Oceana's website.

#### **General Information**

## **Top Posts**

When looking at the top Twitter posts based on engagement, we found that a common theme was including a popular hashtag along with a video, typically of cute marine animals.

A. June 24, 2020 Engagement: 5532

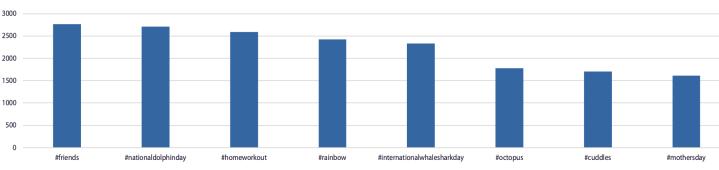

B. August 27, 2020 Engagement: 5493

Coceana @ @oceana · Mar 23 \*\*\* Since they must sleep at the surface, sea otters often wrap themselves in giant kelp to keep from floating away. Sweet dreams!

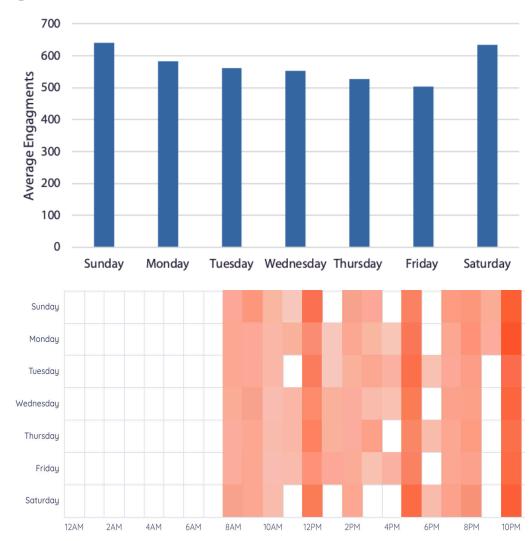

C. March 23, 2020 Engagement: 5220

#### Top Hashtags by Engagement

The hashtags #friends, #nationaldolphinda and #homeworkout received the highest engagment.

#### **Optimal Time to Post**

From the graphs, we concluded the best times to post is Monday at 10:00pm.

### Insights & Recommendations

In order to create a highly engaging, well-performing Twitter account, Oceana should consider the entirity of our findings. One of Oceana's goals is increasing awareness about issues surrounding the oceans and protecting them, as well as the animals living in them.

In order increase activity on their account, Oceana should focus on creating tweets that include:

- content that is casual and amusing.
- a video or GIF.
- hastags related to a holiday.

If they choose to include a URL, one that links to a petition is likely to recieve the highest engagement.

We also determined that tweets without mentions of other people or organizations recieved the highest engagement. However, in order to meet the goal of motivating people to to actions to help save oceans, Oceana should try mentioning more conservation organizations.

Most frequent and most engaging post types are text posts. The single most frequent and most engaging media posts are videos. Hashtags including alliteration related to days of the weeks and marine species tend to recieve the most engagment. Finally, we determined that the best time to post is Monday at 10:00pm.

## Earned Data — Organization

## **Platform Use**

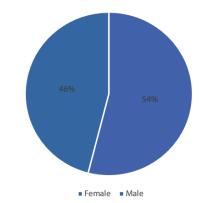

In regards to the organization itself, the platforms that have the highest volume of related posts are first, Twitter, followed by Reddit, second, and Tumblr, third. However, Reddit and Tumblr have significantly less volume than Twitter.

The following information are the number of related post on each platform:

- Twitter: 354822
- Reddit: 3922
- Tumblr: 2189

Displayed in the graph to the right.

### **Demographics**

#### **Twitter Gender Demographics**

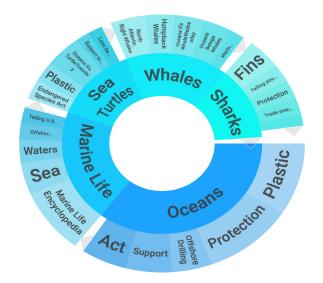

On Twitter, the majority of people who post tweets related to the organization, Oceana, are females.

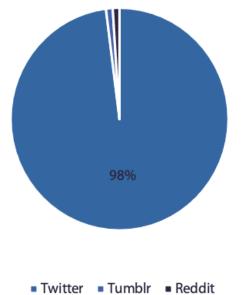

Displayed in the graph to the left.

# Key Themes

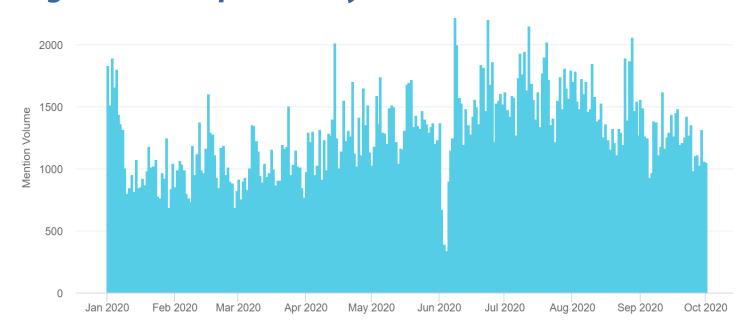

As you can see from the Topic Wheel (pictured right), the main topics and themes being discussed, related to the organization Oceana are:

- Oceans
- Marine Life
- Sea Turtles
- Whales
- Sharks

# Earned Data — Organization Organization Spike Analysis

A. The posts that Oceana shared on June 8th and 9th experienced volume that was 74% higher than usual. On those days, Oceana experienced a total mention count of 2220 (N=2220). The top mentions were included in posts that also included the hashtag #worldoceansday or #breakfreefromplastic.

B. The posts that Oceana shared on June 23rd experienced volume that was 73% higher than usual. On that day, Oceana experienced a total mention count of 2206 (N=2206). The top mentions were included in posts that also included the hashtag #turtletuesday or a link to a petition to support the Endangered Species Act.

 Ceana Cocana - Jul 12
 \*\*\*

 A basufful rainbow to brighten your #Sunday.
 \*\*\*

C. The posts that Oceana shared on July 12th experienced a volume that was 68% higher than usual. On that day, Oceana experienced a total mention count of 2146 (N=2146). The top mentions were included in posts that also included a link to a petition to support the Endangered Species Act or the hashtag #breakfreefromplastic.

# Earned Data — Organization Sentiment of the Organization

Twitter Sentiment

Positive Negative

**Reddit Sentiment** 

41% 59%

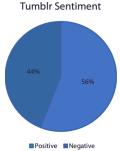

The Reddit posts with positive sentiment include events related to and the actual area that Oceania enompasses. The posts with negative sentiment discuss and highlight the importance of stopping plastic pollution.

The Twitter posts with positive sentiment included cute videos and gifs of

marine mammals as well as links to petitions to help issues surrounding

to legislative actions that are causing more harm to the oceans.

marine life. The posts with negative sentiment included information related

The Tumblr posts with positive sentiment revolve around the topic of whales and how much people love them. The posts with negative sentiment information related to endangered species, the importance of saving those species and resources on how to help.

# **Insights & Recommendations**

1) Many posts that included cute marine mammals on Twitter elicited a positive response. We recommend incorporating more videos and gifs of cute marine mammals in Oceana's social media to attract more users.

2) Posts with high activity surrounded a holiday or event, such as World Oceans Day or Turtle Tuesday. We recommend creating specific hashtags for these events in order to make related content easy to find and interact with.

The main topics of both positive and negative nature on Tumblr surrounded ocean life and protecting it. We recommend capitalizing on these interests by making Oceana's presence well-known through providing resources to help serve these causes.

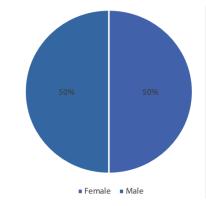

### Earned Data — Main Topics

#### **Platform Use**

In regards to the organization itself, the platforms that have <sup>9%</sup> the highest volume of related posts are first, Twitter, followed by Tumblr, second, and Reddit, third, but both Tumble and Reddit have significantly less volume than Twitter. The following infromation is related to the number of related post on each platform:

- Twitter: 1746624
- Tumblr: 192963
- Reddit: 181368

## **Demographics**

#### **Twitter Gender Demographics**

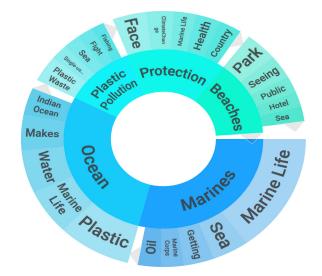

On Twitter, people who post tweets related to the main topics, are spilt 50/50 female to males.

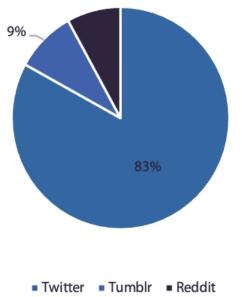

Displayed in the graph to the left.

# Key Themes

As you can see from the Topic Wheel (pictured right), the main topics/themes being discuess, related to the topics surrounding Oceana are:

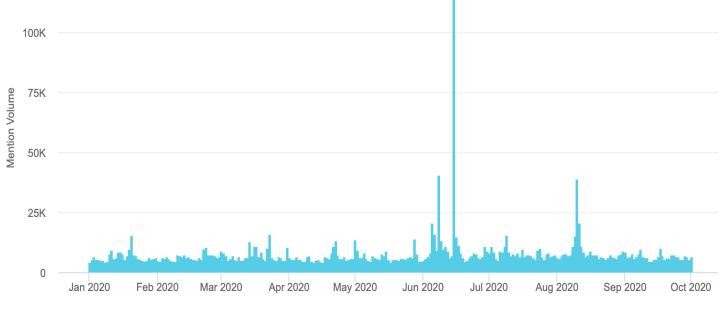

- Marine
- Ocean
- Plastic Pollution
- Protection
- Beaches

#### Earned Data — Main Topics

Reddit Sentiment

Tumblr Sentiment

The Tumblr post with positive sentiment include various genres of fanfiction surrounding love in Oceana. The posts with negative sentiment include fanfictions surrounding the ocean and mermaid creatures, often with sad undertones and unhappy endings.

The Twitter post with positive sentiment include the artist Frank Ocean,

saving the ocean, and reducing the use of plastic. The posts with negative

sentiment include conversations about the effects of destructive fishing,

The Reddit post with positive sentiment include many questions related to

visiting the ocean as well as other erotic posts with the ocean as a metaphor.

The posts with negative sentiment include topics related to Marines and the

harmful pollution in the ocean, and the Endangered Species Act.

Marine One, as well as posts asking about marine pets.

### **Insights & Recommendations**

The posts with the highest activity surrounded current events, such as the Mauritius oil spill. We recommend Oceana posting up to date about all current events on these topics.

2) Posts with the highest activity related to the topic of ocean conservation were also connected to cultural events. We recommend using social media platforms to speak up about these events as well.

### Earned Data — Competition

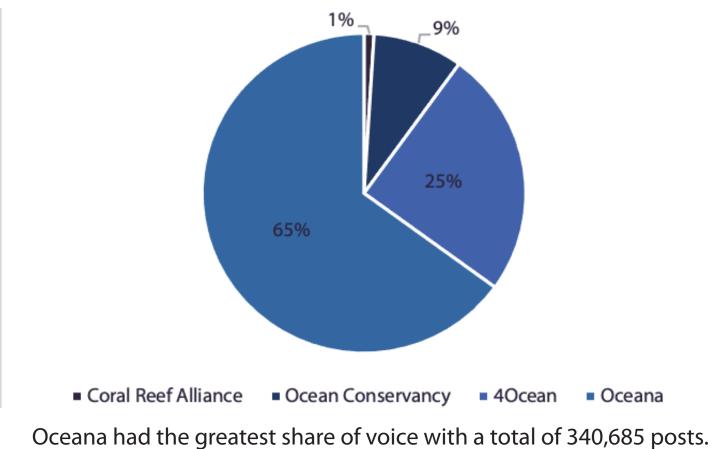

#### Introduction of the Competitors

In order to gain a better understanding of how Oceana's posts perform relative to competitors, we analyzed data from Oceana social media as well as from the following similar organizations:

1. 40cean (@4ocean) — 40cean's purpose is "to clean the ocean and coastlines while working to stop the inflow of plastic by changing consumption habits."

2. Ocean Conservancy (@OurOcean)— "Ocean Conservancy is working with you to protect the ocean from todays greatest global challenges. Together, we create science-based solutions for a healthy ocean and the wildlife and communiteis that depend on it."

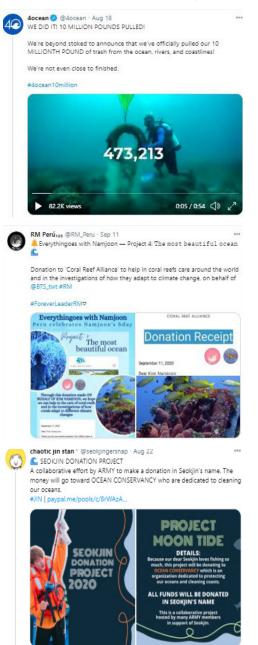

3. Coral Reef Alliance (@coral\_org)— 40cean's has a visison that "one day the world's coral reefs will have adapted to climate change because we acted swiftly."

## Share of Voice

#### **Earned Data — Competition**

#### **Conversation by Competitors**

#### 40cean

The peak post for this organization was on August 18th, 2020. The important takeaway here is that 40cean successfully pulled over 10 million pounds of trash from oceans and rivers. The organization also utilizes pop culture references, such as baby Yoda, in order to be more appealing to audiences.

#### **Coral Reef Alliance**

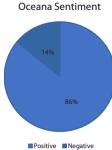

The top post regarding the Coral Reef Alliance mentioned donations in honor of the birthday of a member of K-pop group, BTS. Another cool aspect which drew lots of attention to this competitor was that all profits from pre-ordering an illustrated zine were donated.

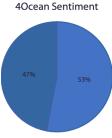

#### **Ocean Conservancy**

The top post for this competitor also revolve around donations from fans on behalf of another BTS member. This post included a PayPal link to make it easy to donate. They also used their organizations specific hashtag, #teamocean, to make themselves easily recognizable.

Coral Reef Alliance Sentiment

#### Oceana Sentiment (pictured left)

The Twitter posts with positive sentiment, regarding Oceana, include a post with the hashtag #ThankfulThursday and a gif of two sea otters. The posts with negative sentiment include conversations enouraging Oceana to continue to do more widespread work.

#### 40cean Sentiment (pictured left)

The Twitter posts with positive sentiment, regarding 40cean, include many posts thanking the organization for their efforts. The posts with negative sentiment include links and references to articles about events that have had a negative impact on oceans and marine life.

#### Ocean Conservancy Sentiment (pictured left)

The Twitter posts with positive sentiment, regarding the Ocean Conservancy, include various posts regarding the passing of The Save Our Seas 2.0 Act. The posts with negative sentiment include discussions about the importance of taking action to clean up the oceans.

#### Coral Reef Alliance (pictured left)

TThe Twitter posts with positive sentiment, regarding the Coral Reef Alliance, include various thank you post for cleaning up the coral reefs. The posts with negative sentiment include twitter users discussing how climate change is killing the planet.

# **Insights & Recommendations**

Peak posts from competitors shared the theme of using celebrities to encourage donations. We recommend Oceana partner up with celebrities to raise awareness.

Spikes in competitor activity correlate to pop culture references. We suggest incorporating these references to attract audiences that Oceana might not typically target.

#### **Overall Insights & Recommendations**

Based on the analysis of owned, earned, and competition data, we recommend that Oceana take the following next steps in order to increase the effectiveness of its social media and enhance it.

- **1) Capitalize on Cute Content.** Twitter posts from Oceana containing videos, gifs, or pictures with cute marine mammals garnered the highest amount of engagement in terms of average retweets and engagement. Clearly, using these endearing animals is the easiest way to capture the attention of social media users. In order to leverage this information, media containing endearing marine life should be included more frequently across Oceana's social media to reach a larger audience than those who are solely interested in issues surrounding marine life.
- 2) **Connect Hashtags with Meaningful Events.** According to Twitter data from Oceana, peak post days included hashtags tied to specific daily or yearly events. Posts using the hashtag #worldoceansday contributed to a 74% increase in Twitter post volume, while #turtletuesday contributed to a 73% higher than usual volume of Twitter posts. Hashtags such as these, which are specific to a certain day or event, make it easy for users to find other related posts. Oceana should continue to make use of these popular hashtags, as well as create new ones recognizable as their own, in order to increase engagement with their posts and raise awareness of events hosted by the organization.

3) Make Action Steps More Accessible. In analyzing the types of URLs included in Oceana's Twitter posts, links to petitions garnered the highest amount of engagement. Since one of the organization's main goals is to protect and restore oceans on a global scale, the power of the masses is certainly needed to attain it. Including petitions is both a great way to boost engagement as well as recruiting more people to get involved with the organization to ultimately achieve its goals. Petition links would also be beneficial because they are linked to Oceana's website instead of an outside source, so visitors can explore deeper into the organization's values, efforts, and other related areas of interest.

#### **Overall Insights & Recommendations**

Plug Into Popular Culture. Top social media posts from competitors such as 4ocean, Coral Reef Alliance, and Ocean Conservancy included pop culture references. Whether that be the use of baby Yoda or K-pop stars, the method of including these famous figures certainly boosted the competition's engagement. Oceana should try to include more pop culture references to get in touch with younger demographics. It would also be beneficial to associate Oceana with prominent figures in society in order to encourage people to donate on behalf of a celebrity's birthday, as is successfully seen with competitors. Popular culture figures, while important, should still have some logical ties with or relevancy to Oceana as a whole.

**5) Raise Awareness of Relevant Current Events.** One the most highly engaged with and talked about topics surrounding Oceana and its competitors is ocean pollution. Correlating with that, one of the most interacted with posts surrounded a recent oil spill in Mauritius. Prominent environmentalist activists such as Greta Thunberg chimed in about this topic as well, which is important to note when analyzing how to approach Oceana's involvement in the topic. Oceana should post more about current events related to ocean crises like oil spills because it aligns with their organization goals. They should include resources for people to aid in the crises, as well as state how the organization itself is going to contribute to the solution. Current events tend to generate lots of buzz at the moment in time, so posting about these events is also beneficial to increasing engagement such as reach and retweets.

6) Increase Hope Through Resources. On both Reddit and Tumblr, a large amount of negativity stemmed from topics of pollution affecting sharks and other marine life in oceans. While many of these posts expressed opposition to marine pollution, Oceana was hardly ever mentioned as a source for solutions. To decrease all the negativity and despair shrouding these topics, Oceana should post more resources, like petitions and fundraisers, on these platforms. By doing so, the posts would contain a more hopeful and even positive tone regarding the future of marine life and putting a stop to ocean pollution.

#### **Overall Insights & Recommendations**

**7 Take a Stand.** Tweets surrounding controversial legislative actions are incredibly important to social media viewers who interact with Oceana and similar organizations. By speaking up about legislation surrounding marine life and staying up to date with it, Oceana can strengthen its position in the mind of users by putting their money where their mouth is. Oceana needs to continue making bold statements by choosing a side and calling people to action in their social media posts. This solidifies their image for people, making them more trustworthy. Including ways to get involved and more informed about the controversial issues also proves to be crucial for increasing engagement.

**Provide Reliable Information.** Oceana's social media benefits from posts that include a gif or video of a fascinating sea creature along with a short snippet about it. A link to Oceana' own Marine Life Encyclopedia proves to be a high ranking form of interaction for Twitter users. By providing reliable information about marine life, Oceana builds its credibility amongst users. This is valuable for Oceana to keep in mind for future twitter posts so that people are more inclined to mention them in conversations surrounding topics like marine life.
